

Foundry & Casting industry faces global competition along with huge demand. To meet on time customer delivery schedules, reduce quality cost (rejection), better & efficient energy utilization, inventory carry cost and labor utilization are also important for this industry. Foundries are poised for a big leap and they need to meet this demand in terms of capacity, international quality and standard needs. Continuous cost reduction pressures and rising material and production costs have made it difficult for this industry to thrive.

To become successful in this challenging industry, you will need a foundry & casting specific software that rightfully fulfils your business needs. Without a business solution to automate the operations and processes, foundries will find it difficult to cope up with the industry benchmarks.

Microsoft Dynamics ERP for foundry & casting allows you complete visibility into all departments, processes and stages of product cycle. It is an end-to-end robust business solution that will change the way you do business. Dynamics ERP is programmed to avail environmental compliance which is fast becoming a global procurement pre-requisite and mandate. It will be your tool to be at the top of your game and not miss out on any opportunity that will come your way from now on.

AN OPTIMAL SOLUTION FOR:

Dynamics ERP is designed for the optimum productivity of foundry and casting companies.

- Transparency with customers
- EDI integration
- Tracking based on Heat Code
- Integrated stock tracking and reuse of scrap
- Reduction in lead time and ensuring on-time deliveries
- Comprehensive Production Planning
- Pattern Management
- Complete traceability and control of material, information, production lots and inter-linkage throughout the process chain

Intech's ERP solution for Foundry & Casting Industry

Intech developed an industry-specific solution - **DynaCast** on the Microsoft Dynamics ERP platform, for foundry & casting industry. DynaCast is your tool to beat the competition by:

- Efficiently optimizing your production line for material and machine utilization
- Tracking stage wise quality rejection including managing quality attributes of different locations/positions on a cast
- Fine-tuning costing via the Costing and Estimation module with Activity Based Costing in terms of power, spares, raw material, and downtime among others
- Bringing out new products by integrating product development with manufacturing, accounting, purchasing and suppliers
- Higher ROI in mould via Pattern Management module
- Making quick and informed decision in forecasting on customer needs, quotations, pricing and other product developments
- Efficient plant maintenance management

The Microsoft Dynamics Advantage

Customer is the king. Today, they expect more for less and to fulfill this desire, you should make your business processes as efficient as possible so that you too don't incur any losses. Microsoft Dynamics ERP is a full-fledge business solution that has following advantages over other software:

- ✓ A standard yet customizable solution to fit to your company's specific needs
- ✓ Enabling back office to handle more volume with less staff thus reducing admin cost
- ✓ Any time any device access to get business status and insights on-the-go
- ✓ Manage multiple languages, currencies & country reporting requirements
- ✓ Increase efficiency, reduce costs & minimize errors by automating previously manual processes
- ✓ Shorter billing cycles by integrating field tickets with invoicing
- ✓ Manage growth and expansion more effectively
- ✓ Economical solution with lesser implementation time and cost
