

Dear Readers,

Inventory Management is at the heart of every business. Manufacturers prefer tracking inventory movement right from manufacturing facilities to the customer delivery. For this, most businesses rely on barcode systems because they are effective, comprehensive, and reliable for managing inventory of any size. No wonder why the barcode scanning system held a [majority market share of over 50%](#) in 2017 and is rapidly increasing! But how do you choose a good barcode inventory system? By ensuring that it lets you:

Print and scan barcodes: A barcode system should let you print multiple barcodes at a time. This helps in managing large inventory in less time and efforts. You can then attach the labels to any shelf unit, product, etc. to quickly scan and track them.

Manage orders effectively: Instantly check the order status and place new orders by just scanning a barcode. You can also set up automatic reorder points on your inventory items to get instant alerts in case the inventory levels go below pre-set levels.

Track inventory across various locations: With just a scan of a barcode, you get all the information about the quantity of that item in any warehouse or store. This helps you in managing logistics and maintaining inventory levels at all your warehouses and stores.

Integrate with your ERP system: Streamline your inventory by integrating your barcode system to your ERP. Any changes tracked in by barcode scanning will be fetched by the ERP to make sure proper documentation, invoices, etc. get generated.

Operate from a mobile application: Mobile applications to operate your barcode system is advisable so that you can operate the system and keep a check on your inventory even when you are not at the site.

Intech, with Microsoft Dynamics ERP, can help you streamline your inventory with barcode systems. [Get in touch](#) to know more.

Why should you integrate barcode scanner & your ERP?

Managing a warehouse is a daunting task. There's so much data to manage, process, and analyse that it becomes difficult to do it manually. Warehouse management takes a lot of time, effort, and energy. However, choosing an ERP system with a warehouse management module is not enough. Your system might still expose inefficiencies in your warehouse. [Read More](#)

Take supply chain to the next level with Dynamics 365

Manufacturers have been using siloed and inconsistent information, as well as manual processes, to understand and manage their supply chain. For a long time, these systems were good enough to keep production going. But manufacturers are now understanding that transforming supply chain management is necessary. They are integrating their assets [Read More](#)
